Management Principles Nov 03 2022 Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and

controlling in a volatile business world. Examples of how the functions are applied in practice cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain competitive advantage for their organisations. The book endeavours to break down the silo of seeing the management functions as separate activities. This is done by continuously placing a management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that affect the organisation.

South African Human Resource Management Jun 29 2022 Book & CD. This fourth edition makes it clear that all who are interested in the sustainability of South Africa -- and Africa -- must put

resource management (HRM) at the very core of the management of organisations generally. The content is aligned to outcomes that are geared towards analytical and critical thinking about the theory and practice of HRM in South Africa. The African context is addressed, and ample information about HRM aspects 'elsewhere in Africa' is provided. This edition breaks away even further from the traditional structure of so many standard HRM textbooks. It challenges a broadening of the 'agenda' and scope of HRM work: HRM is not only about managing employees but also about managing the work and the people who do the work of and in organisations. This involves alternative ways of getting the work of organisations done superiorly. This book will help to apply HRM effectively to achieve its ultimate aim, namely to add value to people, to organisations and to society. This comprehensive book is organised around themes such as: Developing an appreciation for the context of HRM in South Africa; Strategising, designing and planning as preparatory HRM work; Sourcing work talent; Facing the country's people empowerment challenge; Meeting the reward and care challenge; Handling labour and employee relations challenges; Championing change and transformation; Managing HRM-related information, including HRM and sustainability reporting. Based on most recent theoretical developments, the emphasis is on the practical applications. Samples of relevant documents are included, and an accompanying CD contains a wealth of relevant resources as well as a continuing, integrating case study that serves as a basis for these applications, and individual and group activities. As a package, South African Human Resource Management will be extremely valuable to both current and aspirant managers, and HRM resource practitioners.

The Dynamics of Changing Higher Education in the Global South Sep 29 2019 Today, there are generally universities in Africa rather than 'African universities'. The legitimacy of the university in Africa is under serious questions now because of its complicity in racism, patriarchy, sexism, colonialism, capitalism, genocide, epistemicide, linguicide, culturecide, and alienation. In other words, the university in Africa as we know it today is elitist and exclusionary. Therefore, rethinking the idea of the university is fundamental to overcoming its current deficiencies in the Global South. This volume, bringing together a number of national case studies and macro-analyses on the dynamics of changing higher education in the Global South, gestures towards the desired, imagined decolonial African university, which should be a site of multilingualism where African indigenous languages, cosmologies and ontologies become a central part of its identity and soul, intolerant of epistemicides, linguicides, and cultural imperialism, but a site of cognitive and social justice that embraces the idea that all human beings are born into valid, useful, relevant and legitimate knowledge systems.
