[Registries for Evaluating Patient Outcomes](#) Jul 31 2022 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. [The Baby Owner's Manual](#) Dec 24 2021 At Last! **Babies with CVI** Jan 25 2022 "Babies with CVI: Nurturing Visual Abilities and Development in Early Childhood is a guide through the history and best practices related to the treatment of CVI in children from birth to 36 months. This book is based on the author's nearly five-decade career working with families in homes and classrooms.

Understanding and knowledge about effective interventions to address the visual skills of children with CVI evolved enormously over that period. Babies with CVI reflects that evolution. The book presents specific approaches and strategies that families and visual impairment professionals can use to meet the unique learning needs of a child with CVI. It stresses the importance of early intervention, proper evaluation, and integrating teaching opportunities into the child's daily routine"--

*Baptism* May 17 2021 From the earliest days of Christianity, baptism has been a foundational act of faith for the believing community. Although churches may (and do) disagree about whether infants should or shouldn't be baptized, about whether baptism should be by "immersion" or "pouring," and about other doctrinal details-all would agree that baptism mattered to early Christians and still matters. And yet for all too many, baptism remains a ritual hardly understood, and one that seems to lack relevance for the lives we lead from day to day. Here is a book that delves into the mystery, brings understanding, and connects the "water and Word" of baptism to the tragedies and triumphs of daily life. With good humor, sound scholarship, and down-to-earth common sense, Martin Marty demonstrates how baptism can be "used" from day to day in a vibrant life of faith.

**Risk** Apr 03 2020 From the bestselling author of *Team of Teams* and *My Share of the Task*, an entirely new way to understand risk and master the unknown. Retired four-star general Stan McChrystal has lived a life associated with the deadly risks of combat. From his first day at West Point, to his years in Afghanistan, to his efforts helping business leaders navigate a global pandemic, McChrystal has seen how individuals and organizations fail to mitigate risk. Why? Because they focus on the probability of something happening instead of the interface by which it can be managed. In this new book, General McChrystal offers a battle-tested system for detecting and responding to risk. Instead of defining risk as a force to predict, McChrystal and coauthor Anna Butrico show that there are in fact ten dimensions of control we can adjust at any given time. By closely monitoring these controls, we can maintain a healthy Risk Immune System that allows us to effectively anticipate, identify, analyze, and act upon the ever-present possibility that things will not go as planned. Drawing on examples ranging from military history to the business world, and offering practical exercises to improve preparedness, McChrystal illustrates how these ten factors are always in effect, and how by considering them, individuals and organizations can exert mastery over every conceivable sort of risk that they might face. We may not be able to see the future, but with McChrystal's hard-won guidance, we can improve our resistance and build a strong defense against what we know—and what we don't.
