Hyper-Learning Nov 07 2020 “Ed Hess's Hyper-Learning is uniquely practical and is the essential starting point for charting new ways of thinking, living, working, leading, and being fulfilled in our new world.” —Gary Roughead, Admiral, US Navy (retired) former Chief of Naval Operations The Digital Age will raise the

question of how we humans will stay relevant in the workplace. To stay relevant, we have to be able to excel cognitively, behaviorally, and emotionally in ways that technology can't. Professor Ed Hess believes that requires us to become Hyper-Learners: continuously learning, unlearning, and relearning at the speed of change. To do that, we have to overcome our

reflexive ways of being: seeking confirmation of what we believe, emotionally defending our beliefs and our ego, and seeking cohesiveness of our mental models. Hyper-Learning requires a new way of being and a radical new way of working. In Part 1 of this how-to book, Hess takes a practical workbook approach and helps readers create their Hyper-Learning Mindset, choose and embrace their needed Hyper-Learning Behaviors, and adopt their daily Hyper-Learning Practices. In Part 2, Hess focuses on how to humanize the workplace to optimize Hyper-Learning. Featuring case studies of three business leaders and two public companies, this book shows how to harness the power of human emotions, choices, and behaviors to enable the highest levels of human cognitive, emotional, and behavioral performance—individually and organizationally.

The Challenge of Being Human Sep 29 2022
Freud wrote that the greatest problem facing humanity is its destructive urge. There is no one

factor that solves the issue. *The Challenge of Being Human* explores tendencies that make us up and capacities that try to meet them. The shock of ourselves is perennial. We are challenged by our own aliveness and a need to open doors as yet unknown. We are not done evolving, growing, learning, feeling, caring. Growth of capacity to tolerate and work with experience is part of our evolutionary challenge. This book seeks to support us in whatever ways we can begin to meet this challenge.

[Anthropology and the Cognitive Challenge](#) Jul 04 2020
One of the world's most distinguished anthropologists proposes that cognitive science enriches, rather than threatens, the work of social scientists.

Beyond War Jul 16 2021
A profoundly heartening view of human nature, *Beyond War* offers a hopeful prognosis for a future without war. Douglas P. Fry convincingly argues that our ancient ancestors were not innately warlike--and neither are we. He points out that, for perhaps

ninety-nine percent of our history, for well over a million years, humans lived in nomadic hunter-and-gatherer groups, egalitarian bands where warfare was a rarity. Drawing on archaeology and fascinating recent fieldwork on hunter-gatherer bands from around the world, Fry debunks the idea that war is ancient and inevitable. For instance, among Aboriginal Australians, warfare was an extreme anomaly. Fry also points out that even today, when war seems ever present, the vast majority of us live peaceful, nonviolent lives. We are not as warlike as we think, and if we can learn from our ancestors, we may be able to move beyond war to provide real justice and security for the world.

War, Peace, and Human Nature Jan 28 2020

"The chapters in this book [posit] that humans clearly have the capacity to make war, but since war is absent in some cultures, it cannot be viewed as a human universal. And counter to frequent presumption, the actual archaeological record reveals the recent emergence of war. It

does not typify the ancestral type of human society, the nomadic forager band, and contrary to widespread assumptions, there is little support for the idea that war is ancient or an evolved adaptation. Views of human nature as inherently warlike stem not from the facts but from cultural views embedded in Western thinking"--Amazon.com.

Cyber Law, Privacy, and Security: Concepts, Methodologies, Tools, and Applications Jul 24 2019 The internet is established in most households worldwide and used for entertainment purposes, shopping, social networking, business activities, banking, telemedicine, and more. As more individuals and businesses use this essential tool to connect with each other and consumers, more private data is exposed to criminals ready to exploit it for their gain. Thus, it is essential to continue discussions involving policies that regulate and monitor these activities, and anticipate new laws that should be implemented in order to protect users.

Cyber Law, Privacy, and Security: Concepts, Methodologies, Tools, and Applications examines current internet and data protection laws and their impact on user experience and cybercrime, and explores the need for further policies that protect user identities, data, and privacy. It also offers the latest methodologies and applications in the areas of digital security and threats.

Highlighting a range of topics such as online privacy and security, hacking, and online threat protection, this multi-volume book is ideally designed for IT specialists, administrators, policymakers, researchers, academicians, and upper-level students.

Meeting the Challenge of Human Resource Management

Aug 17 2021 While communicating is a vital skill for managers at all organizational levels and in all functional areas, human resource managers are expected to be especially adept communicators, given the important interpersonal component of their roles. Practitioners and scholars alike stand to

benefit from incorporating an updated and more nuanced view of communication theory and practice into standard human resource management practices. This book compiles readings by thought leaders in human resource management and communication, exploring the intersection of interests, theories, and perspectives from the two fields to highlight new opportunities for research and practice. In addition to covering the foundations of strategic human resource management, the book: offers a critical review of the research literature on topics including recruitment, selection, performance management, compensation, and development uses a communication perspective to analyze the impact of corporate strategy on human resource systems investigates the key human resource management topic of the relationship between a company's human capital and its effectiveness directly discusses the implications of communication literature for human resource management practice Written

at the cross-section of two established and critically linked fields, this book is a must-have for graduate human resource management and organizational communication students, as well as for high-level human resource management practitioners.

The Challenge of Human Rights Sep 25 2019

'This volume represents a genuine attempt to think beyond the realms of what exists, to reflect on ideas postulated in the past that could be of great salience in the future. It presents the reader with a key question; to what extent are

the contemporary concepts of human rights and the systems that support them equipped to address the challenges of a changed world? By thinking through some of the ideas of the past, with a set of promising young scholars alongside more established names, readers will gain a sense of how human rights politics have shaped the current regime while also becoming attuned to the extent to which new directions and mechanisms can be forged in the future. Many of the individuals whose contributions are encompassed in this volume have strong links to the Irish Centre for Human Rights, at the National University of Ireland, Galway, an institution that has had a significant impact in its first decade of existence under the stewardship of Professor William A. Schabas. This volume celebrates the success of the institution by showcasing some of the talent it has generated, and is likely to be of avid interest to all who care about the future of human rights.' - From the foreword by Joshua Castellino, Middlesex

University, UK the Challenge of Human Rights takes a detailed and exploratory approach to topics across the field of human rights, and seeks to map a path for future research and policy development. It examines contemporary approaches to established rights, such as the right to peace and the protection against double jeopardy, while also revisiting overlooked or forgotten rights and concepts such as slavery, apartheid and the right to resist, determining the optimal place for those rights in today's world. The contributing authors outline lacunae in human rights law where rights could be established, from voting rights for under-18s to rights for the dead to cultural and intellectual property rights, and also apply completely new approaches to questions that have troubled human rights advocates for decades. This innovative book will be essential reading for researchers and practitioners of human rights law, political scientists, historians, and others who have a general interest in the future

trajectory of human rights. *The Challenge of Right-wing Nationalist Populism for Social Work* Aug 05 2020 Right-wing nationalist populism poses direct attacks on social tolerance, human rights discourse, political debates, the survival of the welfare state and its universal services, impacting on the roles of social work. This book demonstrates how right-wing nationalist populism can and must be countered. Using case studies from around the world, this book shows how a revitalised radical social work where community organisation, building alliances, trade union commitment and social action can be used as political forces to speak up against discrimination and hate in accordance with human rights, social justice, and social work values. The rise of national populism signals that now is the time for social work to forge and reforge such networks and create links with civil society and challenge right-wing populist policies wherever they manifest themselves. It

will be of interest to all social work students, practitioners and academics, particularly those working on critical and radical social work, green social work, anti-oppressive practice and community development.

The Challenge of Human Diversity Apr 24 2022 Middletons fair, uncluttered synthesis of a wide-ranging topic continues to offer inspiration for thinking about what it means to be different from and similar to Others. Brief ethnographic excerpts are interwoven to demonstrate the hold that culture has on us. Such firsthand experiences, reported by anthropologists, reveal the challenging and sometimes humorous situations that can arise when we attempt to understand Others and when they do the same with us. Heralded by Anthropology Today: Middleton, by making the sensory and intellectual challenge of culture shock so central to his pedagogic strategy, has found common ground that should unite all schools of cultural anthropology. The work brims with valuable

insights that broaden possibilities to achieve rewarding human interaction, whether in our own neighborhood or across the globe. Arguably one of the best contemporary treatments of cultural diversity available, the latest edition includes expanded discussions of applied anthropology and ethics.

Matters of Care Oct 26 2019 To care can feel good, or it can feel bad. It can do good, it can oppress. But what is care? A moral obligation? A burden? A joy? Is it only human? In Matters of Care, María Puig de la Bellacasa presents a powerful challenge to conventional notions of care, exploring its significance as an ethical and political obligation for thinking in the more than human worlds of technoscience and naturecultures. Matters of Care contests the view that care is something only humans do, and argues for extending to non-humans the consideration of agencies and communities that make the living web of care by considering how care circulates in the natural world. The first of

the book's two parts, "Knowledge Politics," defines the motivations for expanding the ethico-political meanings of care, focusing on discussions in science and technology that engage with sociotechnical assemblages and objects as lively, politically charged "things." The second part, "Speculative Ethics in Antiecollogical Times," considers everyday ecologies of sustaining and perpetuating life for their potential to transform our entrenched relations to natural worlds as "resources." From the ethics and politics of care to experiential research on care to feminist science and technology studies, *Matters of Care* is a singular contribution to an emerging interdisciplinary debate that expands agency beyond the human to ask how our understandings of care must shift if we broaden the world.

Human Challenge Studies in Endemic Settings
Oct 31 2022 This open access book provides an extensive review of ethical and regulatory issues related to human infection challenge studies,

with a particular focus on the expansion of this type of research into endemic settings and/or low- and middle-income countries (LMICs). Human challenge studies (HCS) involve the intentional infection of research participants, and this type of research is rapidly increasing in frequency worldwide. HCS are widely considered to be an especially promising approach to vaccine development, including for pathogens endemic to LMICs. However, challenge studies are sometimes controversial and raise complex ethical issues, some of which are especially salient in endemic and/or LMIC settings. Informed by qualitative interviews with experts in infectious diseases and bioethics, this book highlights areas of ethical consensus and controversy concerning this kind of research. As the first volume to focus on ethical issues associated with human challenge studies, it sets the agenda for further work in this important area of global health research; contributes to current debates in research ethics; and aims to

inform regulatory policy and research practice. Insofar as it focuses on HCS in (endemic) settings where diseases are present and/or widespread, much of the analysis provided here is directly relevant to HCS involving pandemic diseases including COVID19.

Meeting Place May 26 2022 In this remarkable and often dazzling book, Paul Carter explores the conditions for sociability in a globalized future. He argues that we make many assumptions about communication but overlook barriers to understanding between strangers as well as the importance of improvisation in overcoming these obstacles to meeting. While disciplines such as sociology, legal studies, psychology, political theory, and even urban planning treat meeting as a good in its own right, they fail to provide a model of what makes meeting possible and worth pursuing: a yearning for encounter. The volume's central narrative—between Northern cultural philosophers and Australian societies—traverses

the troubled history of misinterpretation that is characteristic of colonial cross-cultural encounter. As he brings the literature of Indigenous and non-Indigenous anthropological research into dialogue with Western approaches of conceptualizing sociability, Carter makes a startling discovery: that meeting may not be desirable and, if it is, its primary objective may be to negotiate a future of non-meeting. To explain the phenomenon of encounter, Carter performs it in differing scales, spaces, languages, tropes, and forms of knowledge, staging in the very language of the book what he calls “passages.” In widely varying contexts, these passages posit the disjunction of Greco-Roman and Indigenous languages, codes, theatrics of power, social systems, and visions of community. In an era of new forms of technosocialization, Carter offers novel ways of presenting the philosophical dimensions of waiting, meeting, and non-meeting.

The Challenge of Inter-legality Dec 29 2019 The

first book-length treatment to describe and explain how legal orders can be interwoven and what to do about it. The volume discusses inter-legality in different legal fields, situates it within political and legal theory, and provides a normative assessment.

Morality by Design Jun 14 2021 The eleven short, linked essays in *Morality by Design* represent a culmination of two decades of research and writing on the topic of moral realism. Wade Rowland first introduces readers to the basic ideas of leading moral thinkers from Plato to Leibniz to Putnam, and then explores the subject through today's political, economic and environmental conundrums. The collection presents a strong argument against postmodern moral relativism and the idea that only science can claim a body of reliable fact; challenges currently fashionable notions of the perfectibility of human individuals - and even the human species - through technology; and argues for the validity of common sense. In guiding the reader

through Enlightenment-era rationalist thought as it pertained to human nature and the foundations of morality, Rowland provides a coherent, intellectually sound and intuitively appealing alternative to the nihilistic views popularised by contemporary radical relativism. *Morality by Design* ultimately seeks to convince readers that there is such a thing as moral fact, and that they do indeed have what it takes to make robust and durable moral judgments.

Islam and the Challenge of Human Rights Mar 24 2022 In 1948, the General Assembly of the United Nations adopted and proclaimed the International Declaration of Human Rights, a document designed to hold both individuals and nations accountable for their treatment of fellow human beings, regardless of religious or cultural affiliations. Since then, the compatibility of Islam and human rights has emerged as a particularly thorny issue of international concern, and has been addressed by Muslim rulers, conservatives, and extremists, as well as Western analysts and

policymakers; all have commonly agreed that Islamic theology and human rights cannot coexist. Abdulaziz Sachedina rejects this informal consensus, arguing instead for the essential compatibility of Islam and human rights. He offers a balanced and incisive critique of Western experts who have ignored or underplayed the importance of religion to the development of human rights, contending that any theory of universal rights necessarily emerges out of particular cultural contexts. At the same time, he re-examines the juridical and theological traditions that form the basis of conservative Muslim objections to human rights, arguing that Islam, like any culture, is open to development and change. Finally, and most importantly, Sachedina articulates a fresh position that argues for a correspondence between Islam and secular notions of human rights.

Loving Each Other Apr 12 2021 In this exploration of loving and living, bestselling

author Leo Buscaglia addresses the intricacies and challenges of love relationships. He asks such important questions, as: How do we best interweave our lives with our loved ones? Do we change our way of relating depending on the circumstances: If we fail in one relationship, can we succeed in others? In this exhilarating book, Leo doesn't give pat answers. He presents alternatives and suggests behavior that opens the way to truly loving each other. He recalls with heartwarming detail the importance of his own family and friendships in helping him to be open to grow and to love.

Evolution and Prehistory: The Human Challenge Aug 29 2022 Offering compelling photos, engaging examples, and select studies by anthropologists in a variety of locations around the globe, Haviland, Walrath, Prins and McBride present evolution and prehistory in vivid, accessible terms, and show students how the field is relevant to understanding the complex world around them. The authors

present the fundamental concepts from a holistic perspective using three unifying themes to frame the text: 1) the varied ways humans face the challenges of existence, 2) the connections between culture and biology in shaping the course of human evolutionary history as well contemporary beliefs and behavior, and 3) the impact of globalization on the continued survival of our species and planet. This edition offers a new Chapter 4, Primate Behavior, which examines the sophisticated behavior and communication abilities of the great apes and other anthropoid primates, as well as current ethical considerations over the use of primates in medical research. The vital issue of primate conservation is expanded and integrated into our survey of the living primates. Reorganized, streamlined, and richly illustrated human evolution chapters provide the same material vital for an introductory course in human origins as in previous editions but do so with fewer pages of text. In this edition, they have added

new topics to the popular Globalscape, a map/story/photo feature that highlights specific examples of globalization and prompts students to think critically about its scope and consequences. Furthermore, the text's strong supplements program provides instructors and students with a wealth of resources designed to enhance the teaching and learning experience. Nadia is a teen with a dream: to be the first woman on Mars. But to get there, she's got to learn all she can about the science of spaceflight. It's a good thing her friend Eleanor is an Attitude Determination and Control Officer—basically, she pilots the International Space Station! Eleanor takes Nadia on a

conceptual journey through an entire crewed mission to Mars, and explains every challenge that must be overcome along the way; from escaping Earth's gravity well, to keeping the crew healthy as they travel through deep space, to setting up a Mars base, to having enough fuel for the trip home! In *The Mars Challenge*, writer Benjamin A. Wilgus and artist Wyeth Yates bring the reader on a thrilling interplanetary voyage and clearly illustrate the scientific concepts and complex machinery involved. Humans can reach Mars in our lifetime—this book explains how it can be done.

Human Evolution and Prehistory Jun 26 2022

This is a brief text that offers a straightforward, balance presentation on views of human evolution, adaptation, and prehistory. It focuses on selected aspects of physical anthropology and prehistoric archaeology as they relate to the origin of humanity, the origin of culture, and the development of human biological and cultural diversity. Haviland's commitment to challenging student ethnocentrism is continued and reinforced in this new edition.

The Art of Being Human Feb 08 2021

Anthropology is the study of all humans in all times in all places. But it is so much more than that. "Anthropology requires strength, valor, and courage," Nancy Scheper-Hughes noted. "Pierre Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the

dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

To Err Is Human Nov 19 2021 Experts

estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS"three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence"but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda"with state and local implications"for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public

perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors"which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err Is Human asserts that the problem is not bad people in health care"it is that good

people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates"as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

The Challenge of Global Commons and Flows for US Power Dec 09 2020 Global commons are domains that fall outside the direct jurisdiction of sovereign states - the high seas, air, space, and most recently man-made cyberspace - and thus should be usable by anyone. These domains, even if outside the direct responsibility and governance of sovereign entities, are of crucial interest for the contemporary world order. This book elaborates a practice-based approach to the global commons and flows to

examine critically the evolving geopolitical strategy and vision of United States. The study starts with the observation that the nature of US power is evolving increasingly towards the recognition that command over the flows of global interdependence is a central dimension of national power. The study then highlights the emerging security and governance of these flows. In this context, the flows and the underlying global critical infrastructure are emerging as objects of high-level strategic importance. The book pays special attention to one of the least recognized but perhaps most fundamental challenges related to the global commons, namely the conceptual and practical challenge of inter-domain relationships-between maritime, air, space, and cyber-flows that bring about not only opportunities but also new vulnerabilities. These complexities cannot be understood through technological means alone but rather the issues need to be clarified by bringing in the human domain of security.

Hannah Arendt and the Challenge of Modernity

Mar 12 2021 Hannah Arendt and the Challenge of Modernity explores the theme of human rights in the work of Hannah Arendt. Parekh argues that Arendt's contribution to this debate has been largely ignored because she does not speak in the same terms as contemporary theoreticians of human rights. Beginning by examining Arendt's critique of human rights, and the concept of "a right to have rights" with which she contrasts the traditional understanding of human rights, Parekh goes on to analyze some of the tensions and paradoxes within the modern conception of human rights that Arendt brings to light, arguing that Arendt's perspective must be understood as phenomenological and grounded in a notion of intersubjectivity that she develops in her readings of Kant and Socrates.

Human Activity Recognition Challenge Jun 22 2019 The book introduces some challenging methods and solutions to solve the human activity recognition challenge. This book highlights the challenge that will lead the researchers in academia and industry to move further related to human activity recognition and behavior analysis, concentrating on cooking challenge. Current activity recognition systems focus on recognizing either the complex label (macro-activity) or the small steps (micro-activities) but their combined recognition is critical for analysis like the challenge proposed in this book. It has 10 chapters from 13 institutes and 8 countries (Japan, USA, Switzerland, France, Slovenia, China, Bangladesh, and Columbia).

The Essence of Anthropology Aug 24 2019

THE ESSENCE OF ANTHROPOLOGY features an experienced and diverse author team with

expertise in all subfields of anthropology. With an eye to visual and written clarity, the authors present anthropology from an integrated, holistic perspective. They use three unifying themes as a framework to tie the book together and keep students focused: systemic adaptation to emphasize that every culture, past and present, is an integrated and dynamic system of adaptation; biocultural connections that highlight the integration of human culture and biology in the steps humans take to meet the challenges of survival; and the emergence of globalization and its disparate impact on peoples and cultures around the world. Pedagogical elements support these main themes and give deeper insight into the meaning and relevance of a wide range of topics covered in the general narrative by tying examples to behavior today. Insightful questions foster critical thinking, additional Visual Counterpoints widen the book's array of compare-and-contrast examples, and a new Digging into Anthropology feature provides

a hands-on approach to anthropological methods by giving active learning opportunities related to each chapter's content. In addition, the authors have broadened viewpoints to offer explanations and examples from different points of view.

[The East Asian Challenge for Human Rights](#) Jan

22 2022 The East Asian Challenge for Human Rights shows that critical intellectuals in East Asia have begun to chart a middle ground between the extremes of the international debate on human rights, making particular headway in the areas of group rights and economic, social, and cultural (ethnic minority) rights. The chapters form a collective intellectual inquiry into the following areas: critical perspectives on the "Asian values" debate; theoretical proposals for an improved international human rights regime with greater input from East Asians; the resources within East Asian cultural traditions that can help promote human rights; and key human rights issues facing East Asia as a result of rapid economic growth in the region.

The Fourth Industrial Revolution Mar 31 2020 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolu-

tion, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic

materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to

harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
